

EVOLENCE™

true beauty, all year long

The world of dermal fillers is evolving. A new injectable collagen-based treatment, EVOLENCE™, has re-launched in the UK. EVOLENCE™ is a safe, natural and lasting product that is capable of smoothing out facial lines and wrinkles.

People who want to revitalize their appearance and bring back the structure of younger skin can now choose a solution that doesn't need costly repeat treatments every few months. With its patented Glymatrix™ technology, EVOLENCE™ lasts for at least 12 months. EVOLENCE™ has an excellent safety profile with no need for a skin test and breaks down naturally over time, just like the body's own collagen.

Collagen plays a significant part in almost every function of the body, supporting, strengthening and helping to enhance facial contours. EVOLENCE™ is injected where the body's own collagen has been weakened, typically in facial wrinkles. The injected material fills in the missing collagen and thereby raises and smoothes out the depressions of the face.
